The third edition of Plane Answers includes fundamental changes in how some aspects of the theory are handled. Chapter 1 includes a new section that introduces generalized linear models.

Primarily, this provides a definition so as to allow comments on how aspects of linear model theory extend to generalized linear models.

Complex Numbers can be represented pictorially on a plane known as Argand Plane. The plane consists of a Real Axis, and an Imaginary Axis. The angle that z makes with the real axis (counterclockwise) is called the argument of z , and the length of line segment joining z and the origin is equal to $|z|$, also sometimes
